

Category	Description	Reviewers Comment	Action Taken by Reviewed Group
<b>Build</b>	Could you clone from Git and build using the README file?	Due to the nature of the project and immense hardware required we did not individually run the project on our own but rather watched the group demonstrate.	
<b>Legibility</b>	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	The project structure that was built upon in this group has developed clear and understandable structure to their building blocks and scripts.	
<b>Implementation</b>	Is it shorter/easier/faster/ c leaner/ safer to write functionally equivalent code? Do you see useful abstractions?	Everything looks like it is properly written according to the standards we have learned and adhered to.	
<b>Maintainability</b>	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	The uniqueness of this project means there are no generic tests.	
<b>Requirements</b>	Does the code fulfill the requirements?	The team has worked hard with the cards they were dealt and did everything possible they could.	

		There are no additional requirements that need to be met.	
<b>Other</b>	Are there other things that stand out that I think they're current setup is perfect? Can it be improved?	Despite the events in our world. Being able to even do something in terms of remotely working on this project is admirable and deserve recognition. Nothing needs to be improved.
