Category	Description	Reviewers Comment	Action Taken by Reviewed Group
Build	Could you clone from Git and build using the README file?	Cloned, but cannot be built as there is hardware necessary.	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	The flow was neat and everything was very legible. Coding style looks great, as if they took the time to make sure everything was structured.	
Implementation	Is it shorter/easier/faster/cleaner/ safer to write functionally equivalent code? Do you see useful abstractions?	I'm not entirely sure how much cleaner it can be, as I do not understand their code entirely.	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	There is no unit testing, but I'm not sure how easy it would be for them to validate with unit tests that the RC car works as intended, unless there are outputs to assert.	
Requirements	Does the code fulfill the requirements?	They had no requirements from the project manager except to use the certain technologies they had to, but fulfilled whatever they decided on their end.	

Other	Are there other things that stand out that can be improved?	Not for me, since I really can't test it concurrently with the code.
