Group – 42 – Self Driving RC Car

Category	Description	Reviewers Comment	Action Taken by reviewed group
Build	Could you clone from Git and build using the README file?	No but the readme stated clearly that we wouldn't be able to.	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	Code is clean to read. I can tell there was a lot of work put in.	
Implementation	is it shorter/easier/faster/cleaner/ safer to write functionally equivalent code? Do you see useful abstractions?	The code base is clearly written with the idea of modularity.	
Maintain ability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	As the presenter said, it is really difficult to test this code base, so for their use case, everything checks out.	
Requirements	Does the code fulfill the requirements?	Yes, all requirements seem to be met.	
Other	Are there other things that stand out that can be improved?	The project seems like there was a decent bit of trial and error (based off the presentation) but the code doesn't reflect that at all (which is an amazing feat).
